

Superstore Sales Performance Dashboard

Power BI Project Report · AnalystLab Africa · May 2026

PREPARED BY ONYIA GIFT

Project Overview

This report documents an interactive Power BI Sales Performance Dashboard built using the Sample Superstore dataset — equipping retail stakeholders with at-a-glance understanding of sales performance, profitability, customer behavior, and regional trends. The project was completed as part of the AnalystLab Africa analyst training program.

Dataset at a Glance

9,994

Transactions

Order date range: 2015–2018

21

Fields

Including Sales, Profit, Quantity, Discount

17

Sub-Categories

Phones, Chairs, Binders, Tables, Storage & more

49

US States

Across 4 regions: West, East, South, Central

Three product categories (Technology, Furniture, Office Supplies) and three customer segments (Consumer, Corporate, Home Office) span the full dataset.

Business Problem

A multi-state retail chain struggles to identify which regions, products, and customer segments drive — or undermine — profitability. Raw transactional data offers no intuitive insight without visual analysis.

→ Regional Performance

Which states and regions generate the most revenue and profit?

→ Product & Segment Mix

Which products and customer segments represent the largest revenue opportunity?

→ Seasonal Patterns

What monthly trends and YoY comparisons exist across all key metrics?

Key Performance Indicators

Five primary KPIs computed using DAX measures, each displaying current value alongside year-on-year percentage change.

Total Profit

\$286.40K

+48.42% vs PY

Total Sales

\$2.30M

+46.88% vs PY

Total Quantity

38K units

+49.12% vs PY

Total Orders

9,994

+49.57% vs PY

Profit Margin

12.47%

+0.13% vs PY

 Formula: `% vs PY = DIVIDE([Current] - [PY], [PY], 0)`

Dashboard Overview

Interactive Filters

The dashboard includes dynamic filters on the left pane, allowing users to slice data across all visuals:

Non-technical stakeholders can explore data with filters rather than SQL queries.

Key Insights: Regions & Products

West Region Dominance

The West generated **37.86% of total profit**, driven by California (\$457K sales) and Washington (\$138K). South and Central regions lagged, signaling potential for targeted sales intervention.

Top-Selling Products

Canon imageCLASS 2200 led at ~\$62K, followed by Fellowes PB500 and Cisco TelePresence System. Technology-heavy products dominated the top 10 list.

Key Insights: Trends & Segments

Seasonal Surge

Monthly sales showed a pronounced Q4 surge — November (\$325K) and December (\$352K) peaked, while January recorded the lowest at ~\$40K, indicating strong holiday-driven demand.

Customer & Segment Mix

Sean Miller ranked top customer (~\$25K). The top 12 customers contributed disproportionately to revenue, highlighting concentration risk. Consumer segment dominated at **50.56%** of sales, followed by Corporate (30.74%) and Home Office (18.7%).

Strategic Recommendations

Double Down on Top Regions

California, New York, and Washington account for over **\$900K** in sales. Investigate why South and Central regions lag.

Optimize Seasonal Strategy

Pre-position inventory for Q4 peak. Address January slump (~\$40K) with post-holiday offers or new product launches.

Manage Profit Margins

Sales grew ~47% but margin improved only 0.13%. Audit discounts across product lines; Tables sub-category is a known loss-driver.

Nurture High-Value Customers

Introduce a Key Account Management (KAM) program for top 12 customers. Expand Corporate segment pipeline (30.74% of sales).

Leverage Technology Growth

Technology products dominate top sellers (Canon, Cisco, HP). Prioritize SKU expansion and ensure stock availability.

Monitor YoY Trends

46–50% YoY growth is impressive, but benchmark against industry averages to confirm genuine expansion vs. low-baseline recovery.

Conclusion

The Superstore Sales Performance Dashboard transforms **9,994 raw transactional records** into a visually cohesive, interactive analytical tool. By defining meaningful KPIs, building time intelligence measures in DAX, and layering multiple visual types, the dashboard enables retail decision-makers to quickly identify performance patterns, problem areas, and growth opportunities.
